## Locking Management Options (Available On Demand)

Most businesses operate differently. Maclocks customized solutions allow you to choose the ideal IT control level over your business's equipment.

### Master Key System/ Individual Keys

Admin access with user keys. A master key gives your IT staff universal access to unlock any piece of equipment within your company, while each employee has their own individual lock and key.

### Keyed Alike System

Each key opens each lock. Shared access is ideal for a shared hardware environment such as labs. It provides wider freedom to access its equipment without worrying about non-employee theft or harming employee access.
